GRAPHITE

Graphite is an essential mineral for heavy and technology industries. Demand projections for natural graphite show dramatic increase in the near-term

Lac Aux Bouleaux Graphite Deposit

Graphano's Lab Aux Bouleaux deposit is situated in the province of Quebec (Canada), a mining friendly jurisdiction that offers great support to mining companies developing strategic materials

Great Infrastructure

The LAB deposit is located in the southern part of the province of Quebec, near power and transport infrastructure. The deposit is adjacent to the only operating graphite mine in North America.

Diversified Industrial Applications

Graphite is used to make lubricates, batteries, anodes, car brakes, pencils, in tires, and many other applications.

Natural graphite supply expected to increase by 300% in 2026 to fullfil global demand

300%

EV Revolution To Drive Demand For Graphite

Electric vehicle batteries use about 1 kg of graphite per kWh. One Gigafactory (35GWh/yr.) will need 35,000 tonnes of graphite per year. Over 100 factories are expected to open
