

Disclaimer

This presentation contains certain forward-looking statements that reflect the current views and/or expectations of Graphano Energy Limited ("Graphano" or the "Company") with respect to its performance, business and future events, including statements regarding the Company's beliefs regarding future exploration of its projects, future drilling locations and its plans and budgets, exploration and permitting timelines, future acquisition opportunities and exploration plans.

Forward-looking statements are based on the then-current expectations, beliefs, assumptions, estimates and forecasts about the business and the markets in which the Company operates, including that: the current price of and demand for minerals being targeted by the Company will be sustained or will improve; the Company's current exploration programs and objectives can be achieved; the Company will not experience any material accident, labour dispute or equipment failure; financing will be available if and when needed on reasonable terms; and the Company will be able to identify and acquire additional mineral interests on reasonable terms or at all. Investors are cautioned that all forward-looking statements involve risks and uncertainties, including: that the Company has a limited operating history; that resource exploration and development is a speculative business; that the Company may lose or abandon its property interests; that the Company's properties are in the exploration stage and without known bodies of commercial ore; that the Company may not be able to obtain all necessary permits and approvals on any of its properties; that environmental laws and regulations may become more onerous; that the Company may not be able to raise additional funds when necessary; potential defects in title to the Company's properties; fluctuations in currency exchange rates; changes in tax or royalty rates; operating hazards and risks; potential inability to find suitable acquisition opportunities and/or complete the same and other factors listed in the Company's public filings, including its Management's Discussion and Analysis, a copy of which is available under Graphano's profile at www.sedar.com.

Although Graphano has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking information, there may be other factors that cause, actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking information, or the material factors or assumptions used to develop such forward looking information, will prove to be accurate. Readers are cautioned not to place undue reliance on forward-looking information due to the inherent uncertainty thereof. The Company does not undertake any obligations to release publicly any revisions for updating any voluntary forward-looking statements, except as required by applicable securities law.

The Value Proposition

- **Great Infrastructure** – the Lac Aux Bouleaux (LAB) deposit is adjacent to the only graphite mine in Canada and the United States and has readily available power and transport infrastructure.
- **Focus on near term production** – Given the positive historical results on the flake sizes and purity of LAB's graphite and the available infrastructure, the project could be fast-tracked to production.
- **Great Upside** – As a new listed company with fast growth potential, Graphano offers high stock upside potential to investors.

About Graphite

- High melting point material essential to the refractory industry.
- Good conductor of electricity used as an anode material, e.g., batteries.
- Soft and slippery material used in pencils and as a dry lubricant.
- China accounted for 62% of natural graphite production in 2020.

There is No Turning Back: EVs are Here to Stay

The EV Revolution is Driving Dramatic Demand for Electric Minerals
As Graphite is the Main Anode Material for EV Batteries, Demand is
Expected to Increase Significantly.

Graphite Demand for EVs

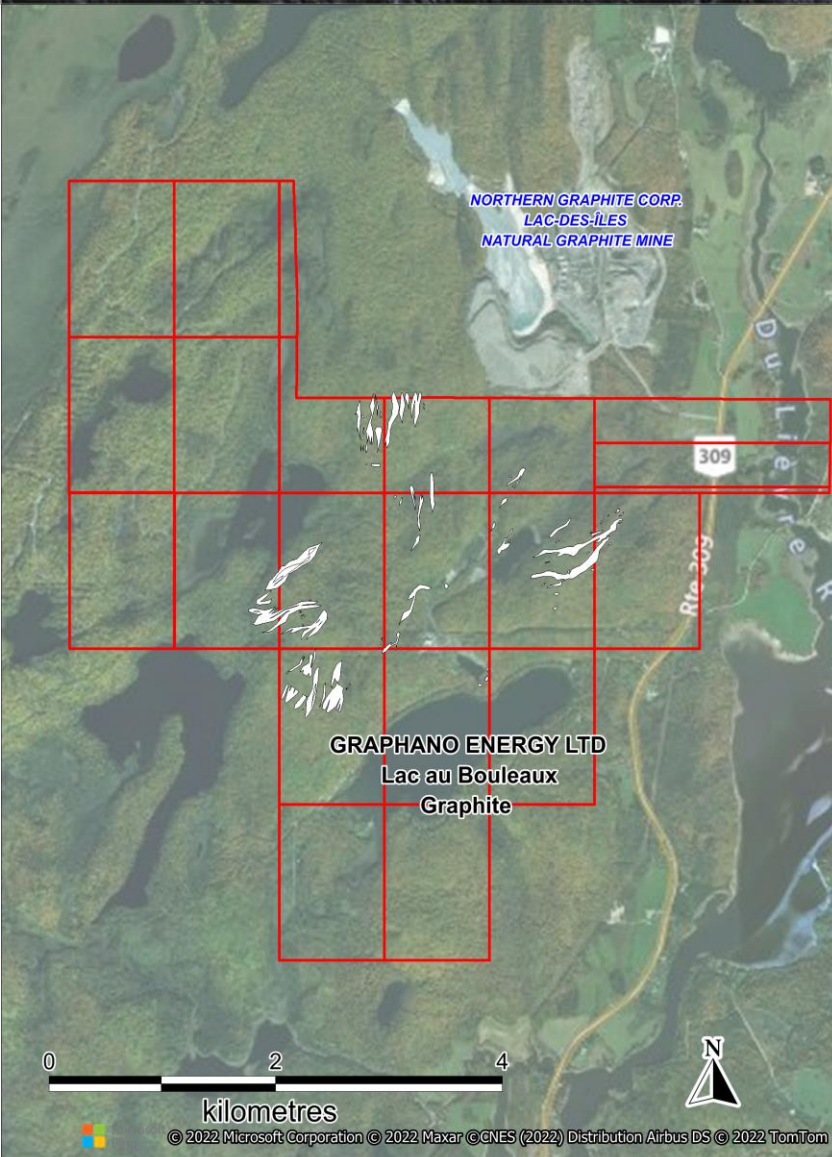

- Total current production of natural graphite is 1.1 million tonnes⁽¹⁾.
- As internal combustion engines vehicles are phased out, graphite demand for EV batteries alone could increase to 5 million tonnes, opening the opportunity for dozens of new graphite mines to open in the next 5 to 10 years.

Number of Gigafactories needed worldwide (for cars)					Graphite Demand ~5 million tonnes per year ⁽²⁾ .
Gigafactory output	Car battery size	Factory car output	Number of vehicles needed	Number of Gigafactories	
20 GWh/yr	70 kWh	286,000	71 Million	249	
35 GWh/yr	70 kWh	500,000	71 Million	142	
105 GWh/yr	70 kWh	1.5 Million	71 Million	48	
150 GWh/yr	70 kWh	2.1 Million	71 Million	34

Lac Aux Bouleaux (LAB) Property

- Past exploration tests intersected significant graphite mineralization in drill holes and trenches.
- Preliminary metallurgical results returned very good results with recoveries up to 96%. The high percentage of large flake graphite is positive for a high quality, premium priced product.
- Infrastructure is excellent with road access and electrical power on site.
- The property is located contiguous to Northern Graphite Corp's Lac des Iles producing graphite mine.
- Potential for near term production.

LAB Prospecting Targets

- The property contains eight prospective targets which have been identified on the property to date, through trenching and sampling programs.
- The 2022 drilling program focused on Zones 1 and 4, which showed the presence of high grade graphite at surface and at depth.
- The second phase of the exploration work expected to start in 3Q 2022, will expand exploration work to the other six zones to identify additional drilling targets for next years drilling program.

LAB Property: Select Drilling Results

Graphano drill program 2022 (Zone 1):

Drill Hole LB22-30 intersected 6.34% graphitic carbon (Cg) over 11m at 106m drilled depth including 9.15% Cg over 4.0m.

Drill Hole LB22-18 intersected 6.0% graphitic carbon (Cg) over 6m at 65m depth;

Drill Hole LB22-21 intersected 4.58% Cg over 9.8m at 95.2m drilled depth.

Drill Hole LB22-24 intersected three zones as follows:

Top zone of 6.12% Cg over 9.0m at 43.5m;

Middle zone of 4.81% Cg over 2.0m at 84.0m;

Lower zone of 6.09% Cg over 6.0m at 90.0m.

Drill Hole LB22-26 intersected minimum of 5.29% Cg over 9.0m at 23.9m drilled depth, including 7.51% Cg over 5.0m.

Drilling program 2018:

Drill Hole LAB18-02 intersected 8.45% Cg over 6.0m at 28.3m drilled depth.

Drill Hole LAB18-03 intersected 9.26% Cg over 6.77m at 80.13m drilled depth.

Historical Drilling (old pit) 1981 – 82:

Drill Hole 82-25 intersected 11.67% Cg over 14.66m at 23.56m drilled depth.

Drill Hole 82-41 intersected 7.97% Cg over 18.78m at 9.57m drilled depth.

Drill Hole 82-55 intersected 10.58% Cg over 11.88m at 3.66m drilled depth.

Drill Hole 82-70 intersected 13.76% Cg over 9.76m at 16.76m drilled depth.

Standard Mine Property

- Based mostly on historical reports we were able to drill right through the high-grade mineralization at the historical Standard mine. Going forward we will develop a detailed exploration plan for Standard, starting with airborne geophysics, with the aim of defining additional significant resources within trucking distance that could be added to future production from the historical resource at Lac Aux Bouleaux. The forward plan is to consolidate potential resources from our regional claims and to feed our own centralized processing plant using the existing mill buildings at Lac Aux Bouleaux.”
- The 2022 geophysical survey completed over the area identified conductive anomalies outlining the graphite zone, which extends over 500 meters, and encompasses the historical mine.
- The original operators produced graphite on a small scale between 1923 and 1930 but ceased operations due to the low unit price of graphite during the 1929 market crash.
- Prospecting work consisting of ground geophysics and trenching will be conducted in 4th Q2022 to identify drilling targets.

Dudley and Lac Vert-Bouthillier Graphite Projects

- The Company has staked two sets of additional graphite claims, 5 km and 10 km south from the Lac Aux Bouleaux project, as part of the Company's consolidation strategy.
- A total of 11 claims covering 600 hectares were staked and comprise the Dudley and Lac Vert-Bouthillier graphite showings.
- The development of historical graphite deposits as well as new discoveries, all within trucking distance, should allow for resource consolidation to one processing centre at Lac Aux Bouleaux.

Management Team

Luisa Moreno, Ph.D., CEO – Dr. Moreno possesses unparalleled expertise in strategic minerals and related processes. She is currently Founder and Managing Director at Tahuti Global. Prior to this, she spent 7 years as a Financial and Senior Equity Analyst at Canadian financial research and investment banking firms. She is on the board of several strategic minerals.

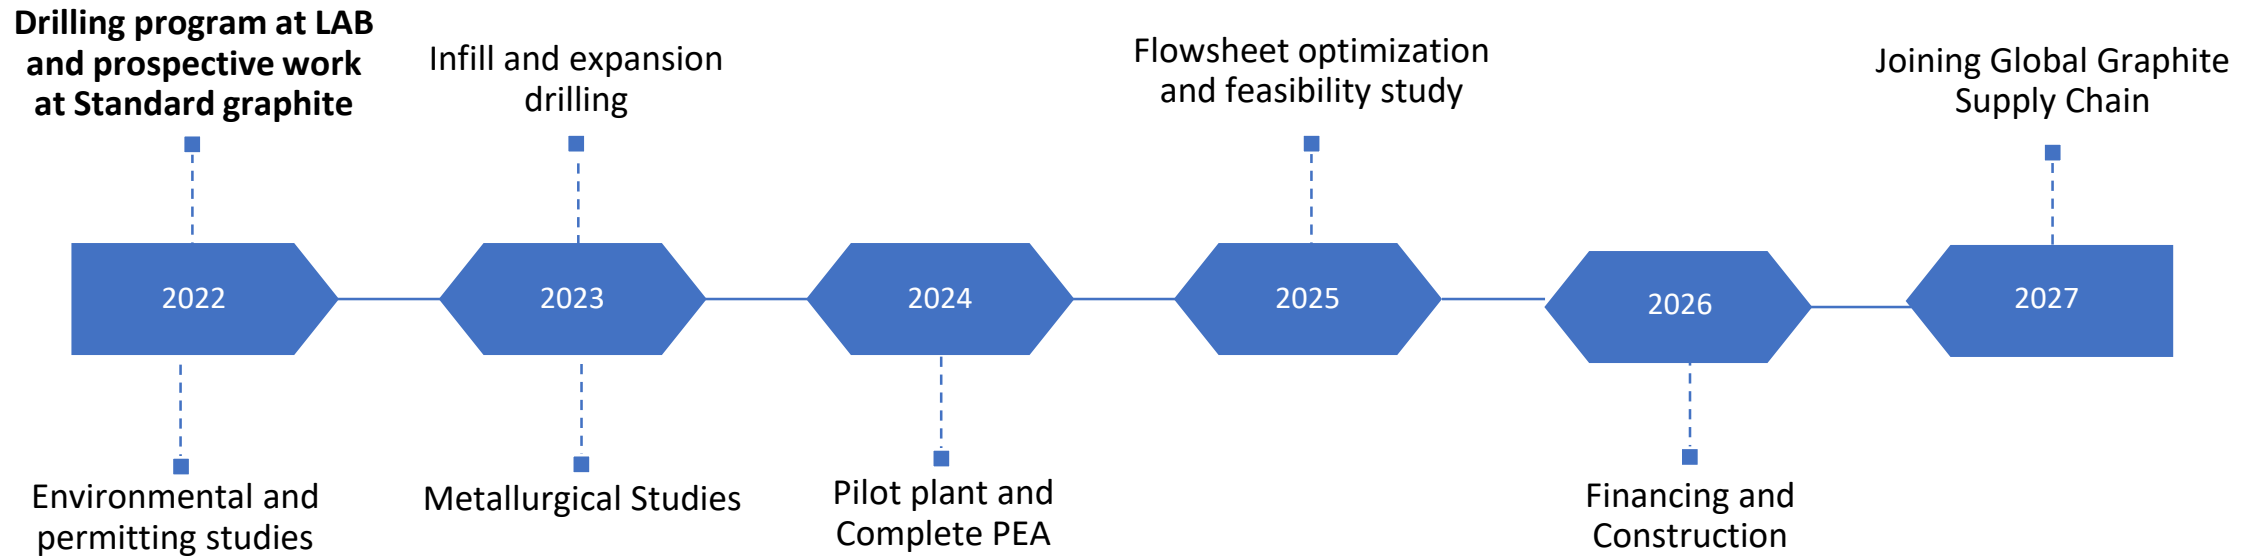

Jay Richardson, CFO – Mr. Richardson is a Canadian Chartered Accountant (CA CPA), a Singapore Certified Public Accountant (CPA) and a Fellow of the Insolvency Practitioners' Association of the United Kingdom (FIPA). He has practiced as a Partner at Ernst & Young (Canada and Singapore) and KPMG (UK) prior to establishing his own practice as a company doctor in Toronto, Canada in 1993. He has served as the CEO or Chairman of eight listed public companies and as CFO of numerous others. He has extensive public company governance experience from over a dozen Board memberships including having served as Interim Chairman of the Argus Corporation.

Nathan Rotstein - Mr. Rotstein has over 45 years of experience in the financial markets. He has consulted with numerous companies in the energy metals sectors including but not limited to cobalt, manganese, graphite and lithium. Nathan also has an extensive global network comprising international funds and high net worth individuals.

Martin Kepman, Director – Martin Kepman and Associates Inc, founded in 1982, is a business development and management consulting firm owned and operated by its president Martin Kepman. Martin, in his 34 years of consulting experience, has consulted on a wide range of projects, in multiple industries ranging from software , soft goods, printing, food to mining.

Roger Dahn, Director – Mr. Dahn has over 30 years experience in the mining and exploration industry. His experience includes over 16 years with Noranda Inc. and Hemlo Gold Mines Inc., Exploration Manager-Eastern Canada for Battle Mountain Gold Company and Vice President-Exploration with Olympus Pacific Minerals Inc. and most recently Tri-Star Resources PLC. Mr. Dahn has been involved with a number of base metal and gold discoveries which advanced to development stage and production. His extensive mineral exploration experience covers both Canadian and International settings. Mr. Dahn is a registered professional geologist and Qualified Person as defined by National Instrument 43-101.
